Have you **PackedIt** yet?

Project Overview

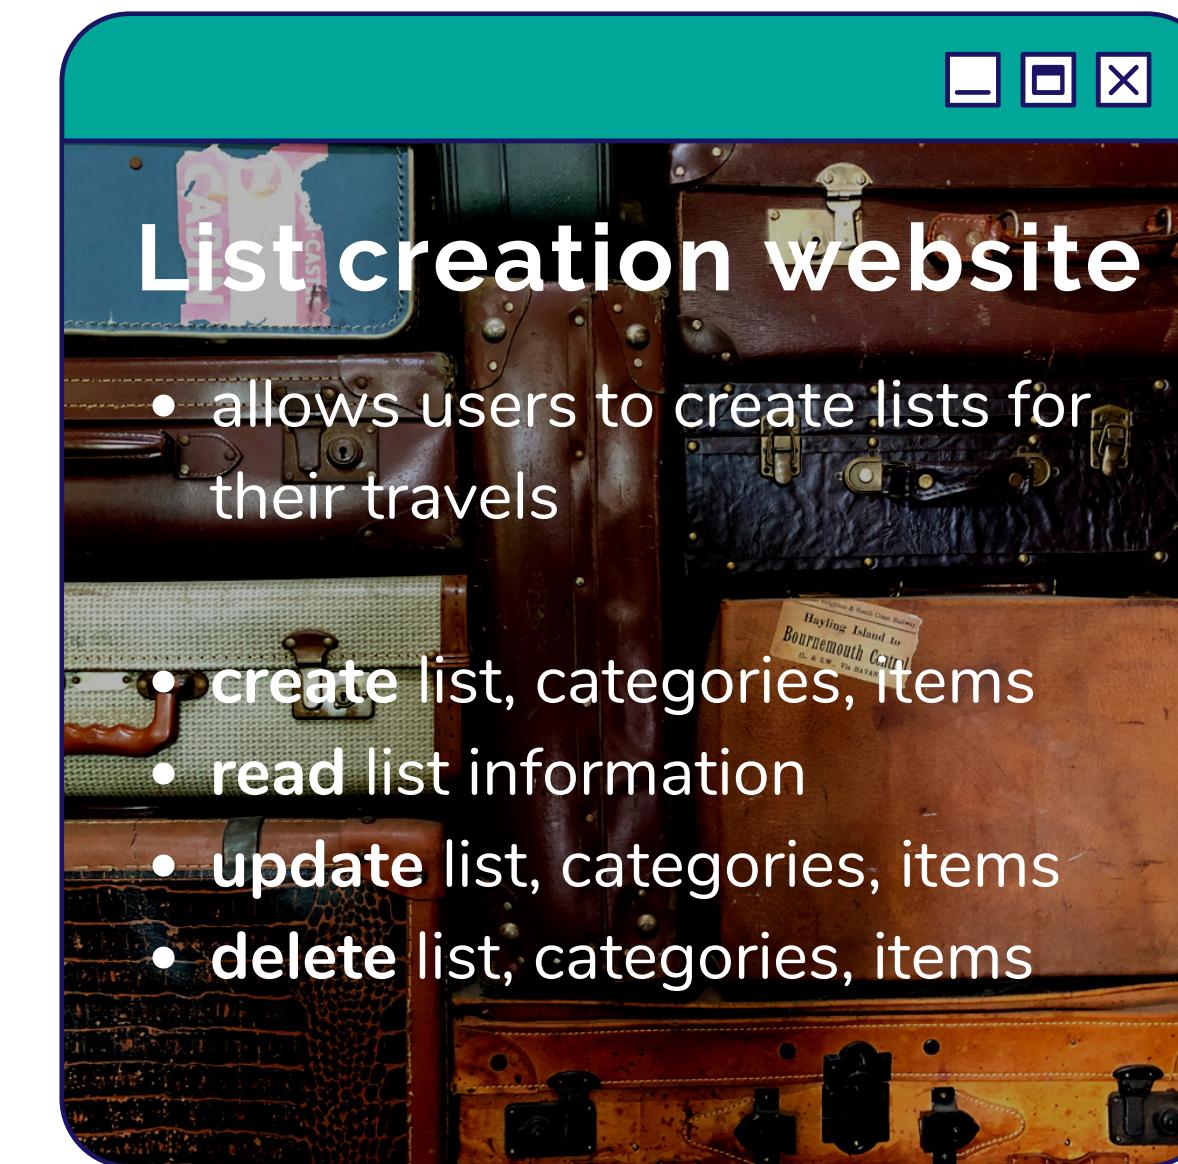

- web application to create and store lists
- aimed at travellers
- no more forgetting travel essentials!

PackedIt

Development Decisions

Love of travel +
Making a basic CRUD
program

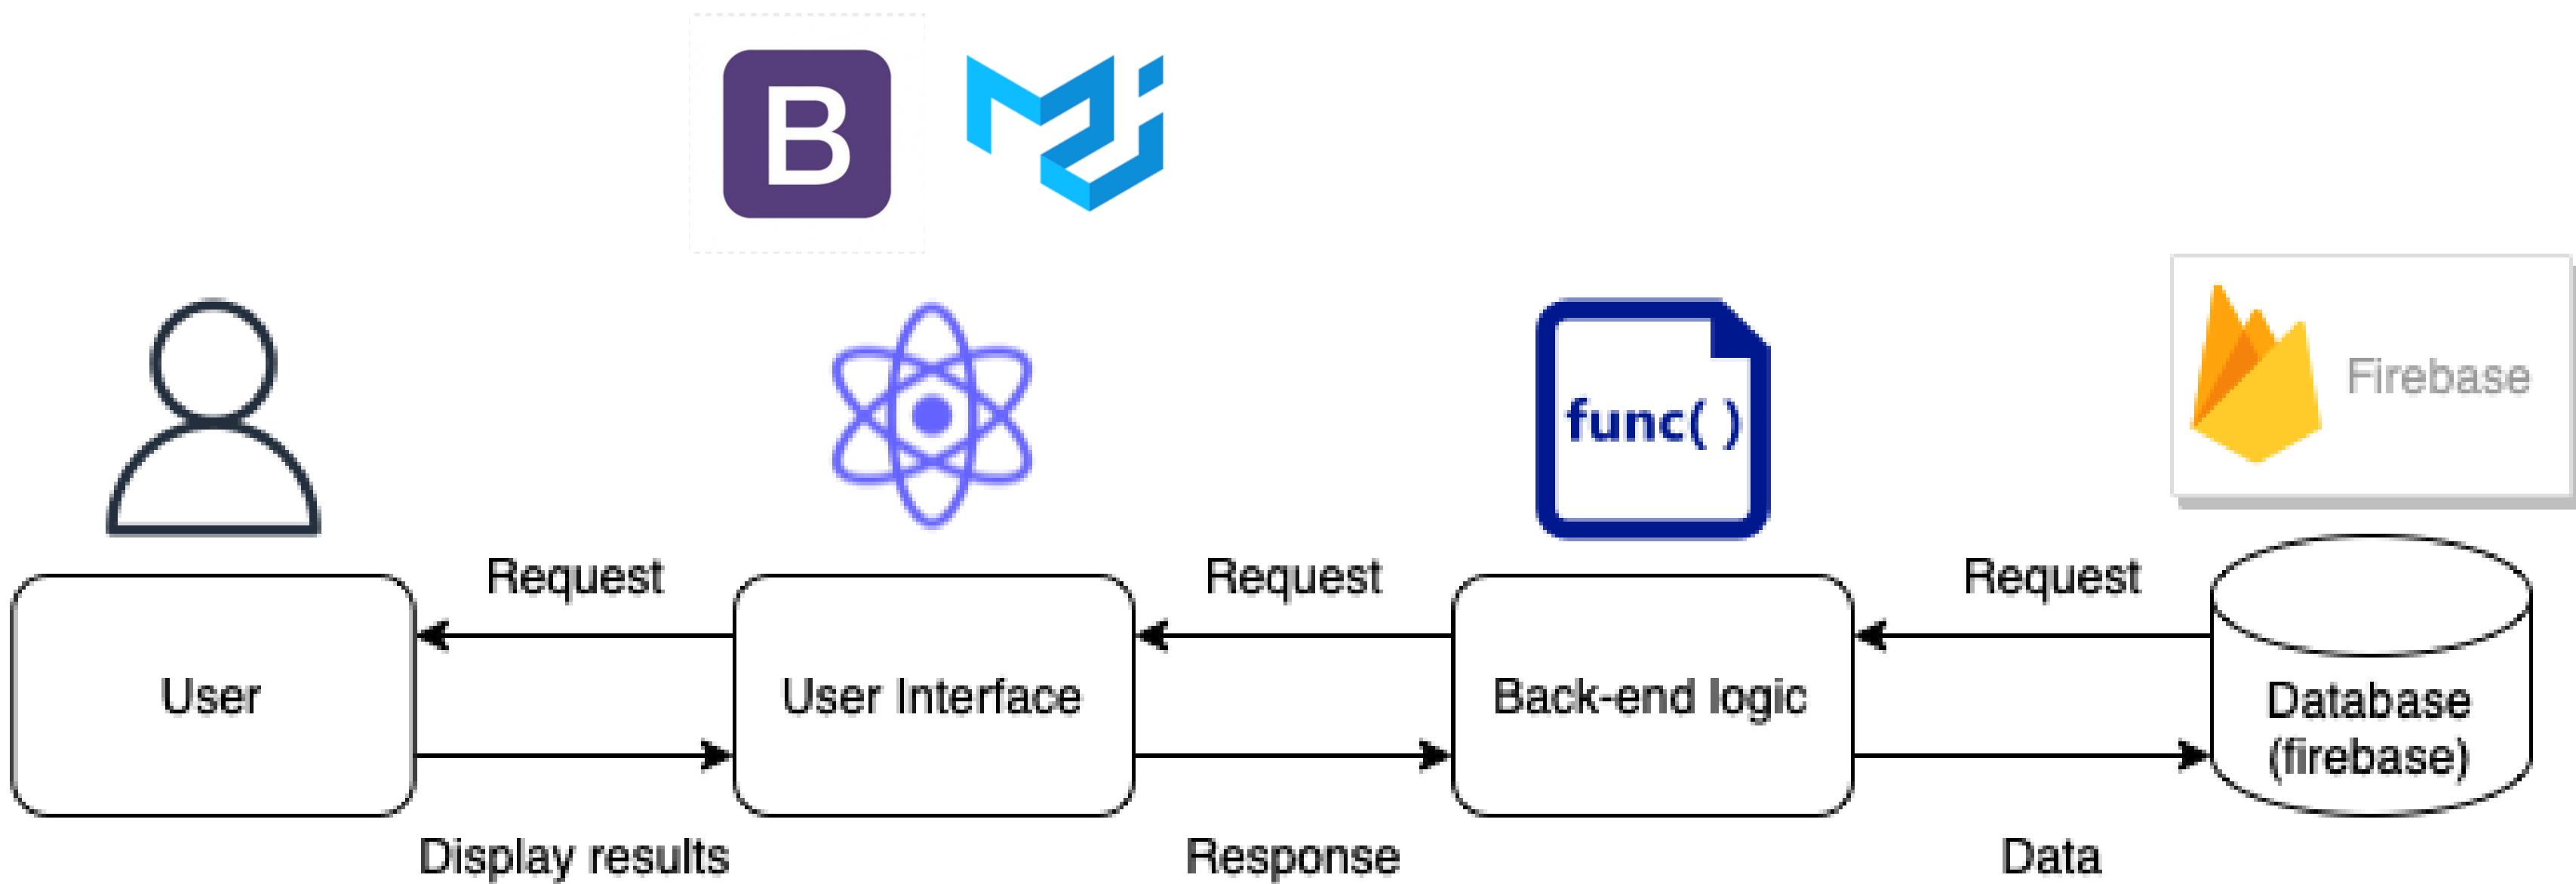

Project Goals

- Users can create a packing list
- List creation on Home takes in name, destination, date of travel, and preselected categories
- Users are redirected to a page where they can add more categories and lists, and can view other lists they have created
- User can view/edit/remove anything they have added

Design & Architecture

PackedIt

Home Lists About Contact

Hi!

We are Grace, Laura, Michelle & Eilidh.

We are aspiring software developers and this website is our final project at the Code First Girls Bootcamp!

PackedIt makes trip planning easier by allowing users to make an organised list.

No more forgetting any essentials! So, have you PackedIt yet?

Morkie, Shih Tzu, Border Collie, Papillon

If you have any questions about the project or would just like to have a chat, feel free to send us a message at

packeditteam@gmail.com

Demo

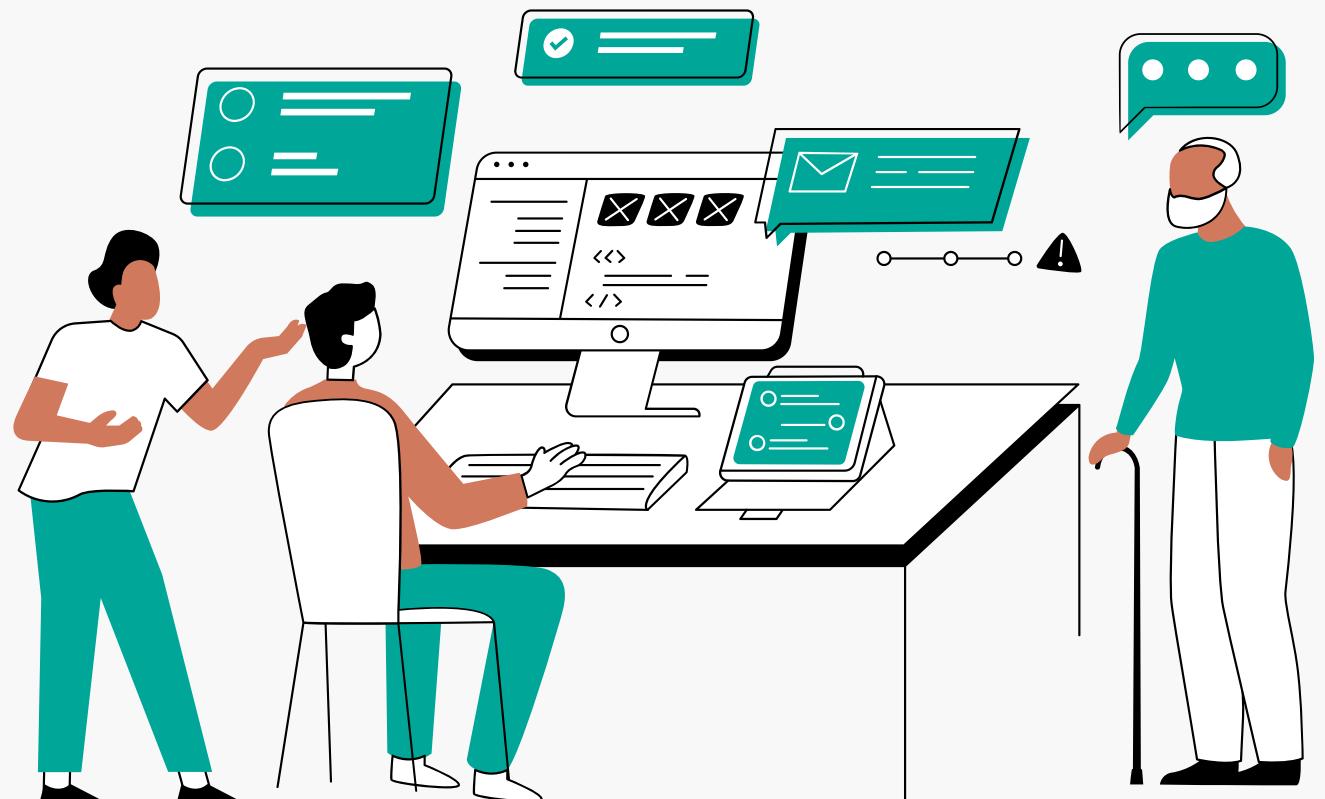

Reflections

- should be more open to new technologies
- more time for a better grasp and better coding practice
- styling of certain elements were difficult so there was a slight lack of consistency
- communicated often
- good division of tasks
- good time management

Future Thinking

- Login & user account features
- Creating a 'favourites' list which can be applied to any trip for regular packing essentials
- Connecting to a weather API for the trip destination and providing suggestions on what to pack based on that

Thank you! Questions?
